(a) Per-symbol loss comparison across configurations
bits per Y symbol
H_Y theoretical
$w+1$-gram on $\mathcal{Y}$
$mW+1$-gram on $\mathcal{X}$
penalty
k=1,M=2
k=1,M=3
k=1,M=4
k=2,M=2
k=2,M=3
k=3,M=2
(b) Fragmentation penalty decomposition: theoretical vs empirical
bits per Y symbol
Phase ambiguity (theoretical)
Context deficit (theoretical)
Empirical penalty ($L_X - L_Y$)
k=1,M=2
k=1,M=3
k=1,M=4
k=2,M=2
k=2,M=3
k=3,M=2
